

Announcing Iron Eagle of Sherrodsville

Iron Eagle opens water recycling facility to serve oil and gas industry

We accept and process most types of oilfield waste and process streams

Iron Eagle Enterprises is pleased to announce the opening of its water recycling terminal in Sherrodsville, OH, to serve oil and gas drillers operating in the area.

The Iron Eagle facility already complies in advance with pending Ohio legislation pertaining to the proper disposal of oilfield wastewater.

The treatment operations will be managed by RETTEW Flowback Inc. (RFI), an engineering firm with offices in Canton that also provided site design and facility permitting.

The wastewater will be treated first and then filtered to remove contaminants. The recycled water will be hauled back to the producers to continue the cycle of drilling and stimulating wells (shale or conventional).

Features and benefits of the water recycling plant:

- 24/7 service; trucking needs provided
- Accepting all types of water
- Processes 14,000 barrels of water per day
- Automated tanker rinse-out
- Saves money by reducing the amount of fresh water drillers must purchase
- Eliminates disposal fees at injection wells
- This is a load-in and load-out facility, reducing transportation costs
- On-site laboratory services
- Top rated safety companies
- Certified "down hole" analysis

We renew the most valuable resource: water
